Challenge-05 GIT - Specification

For this week's challenge, you will need to create a **responsive web page** and use **Flex** for positioning the elements. Use the screenshots to see how the page should look like.

After finishing the project, try to **upload it to Git** by using only terminal commands.

Create a **private repository** and add your mentors by their GitLab username (we will share these in your slack channel).

Name your project repo **BrainsterChallenges_FirstnameLastnameGroup** (ex. BrainsterChallenges_AntonioStoimenovFE1) and leave the main branch with a readme.md file only.

Initiate a new branch from main and name it Challenge 05 - CSS Flex & Git.

Be careful while working with Git, you will use this repo for all the next challenges.

Evaluation system:
1 point - Whole page completed in HTML & CSS;
3 points - Responsive for tablet & mobile devices;
5 points - Project committed on GitLab.

Deadline
1 week after its presentation, at Sunday 23:59 (end of the day).

Good luck! 🍀
